About Me

AI & Data Science enthusiast and first-year B.Tech student at KCT, skilled in Python, ML basics, and data analysis. Creative thinker with a knack for problem-solving and a passion for building real-world AI solutions.

Skills

- Python programming
- Machine Learning
- Data Science Skills
- LLM Basics
- Data Analysis
- Computer Vision Basics

Critical Thinking

Education

Bachelor of technology

Kumaraguru College of Technology 2024 - 2028

Pursuing B.Tech Data Science with a focus on emerging technologies, Machine Learning ,AI, and real-world problem-solving. The program blends theoretical foundation with practical exposure through labs, projects, and industrial training.

Experience

Data Analysis

Took a telecustomer dataset from the kaggle and done the data preprocessing and data analysis process. Created a easily understandable dashboard using PowerBI

Kisan

Developed a AI bot for farmer to interact in their own language to understand the Farming schemes , I have used the RAG(Retrival Augmented Generation)

Dengue Prediction

Developed a future predicting dengue model , to help government offical to take safety precautions priorly they get spread . I have used the ML model for prediction and show using easily understandable dashboards

Extra Activities

Hackathons

Participated in NGP College Hackathon.
Passed the First round of Meta & Scalar School of Hackathon

Workshop

Completed a workshop in LLM Basis majorly focuses on API and how RAG works , how LLM works , Token generation

Art Works

Participated in a online art contest. Submitted a digital artwork and received a certificate of appreciation for creative expression.
